

## 1843 - CVM used at POS for remote payment via a POI

### Background:

Since CB2A 1.6.2., the cardholder verification method used at POS is expected in face-to-face payment but it is also expected for remote payments using a POI (additional invoice after the closure of a pre-authorisation file).

### Implementation:

#### Change in volume 3.3 – Remote payment – Secured electronic payment

#### 8 Messages description

##### 8.1 Authorisation request and response
